Generative AI INTERN JOB AD

About TCS IT unit:

TCS Hungary, in its IT services area, implements best-in-class solutions for the Business 4.0 era, enabling strong digital foundations for our customers worldwide. We are working with wide range of technologies and solutions in data engineering, business intelligence and data science along with generative AI. Our work includes hybrid cloud solutions, hand-in-hand with Azure, AWS or GCP based native architectures, building scalable and efficient solutions for corporate data management.

The key requirements for the role are:

- being a full-time BSc/MSc student enrolled at a Hungarian university studying Computer Science or related studies

- if you are required to complete a mandatory internship during your studies which is no more than 320 hours

- if you speak fluent English and looking for international experience

- if you have some experience in high level programming languages, such as Python or Java

- if you have good experience in full stack development

- if you are interested in data engineering, data science along with generative AI and business intelligence

- if you can imagine yourself in large scale, international development projects related to corporate data management and business intelligence

and advantages would be the knowledge of:

- if you are familiar with full stack development with some knowledge of LLM

- if you have a moderate statistics background

- if you are familiar with cloud platforms in any nature

- if you are familiar with SQL or no-SQL databases

your responsibilities will be:

- You will be learning Generative AI principles and models

- You will be learning Large Language Models, Natural language processing

- You will be working with Different generative AI Tools and uses

- You will learn the LLMs, NLP fundamentals, Transformers, and attention mechanism

- You will Build Custom dataset for LLM, Build your own custom chatbot/AI bot/custom GPT

- You will be experiencing building generative AI solutions with vector DB, Lang Chain

- You will be experiencing with machine learning frameworks

- You will experience working at a fast-growing, truly colorful company

- You will be mentored by senior engineer colleagues

What we are offering:

- Possibility to start a global career in IT in a global and multicultural environment
- Digital internship program focused on constant innovation and application of emerging technology.
- Possibility to work with clients leading in their industries.
- Internship induction & mentoring programme
- Comprehensive opportunities for additional training and development through our Talent Development programme and online learning platforms
- A successful employee engagement & community volunteering platform
